Other Short-term liabilities as a % of total public funds	8.36%
Other Short-term liabilities as a % of total liabilities	7.72%
Other Short-term liabilities as a % of total assets	0.96%

(vi) Institutional set-up for liquidity risk management:

Liquidity risk is defined as the risk that the company will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset. Liquidity risk arises because of the possibility that the company might be unable to meet its payment obligations when they fall due as a result of mismatches in the timing of the cash flows under both normal and stress circumstances. Such scenarios could occur when funding needed for illiquid asset positions is not available to the company on acceptable terms. The company has developed internal control processes and contingency plans for managing liquidity risk.

The Company's principal sources of liquidity are "cash and cash equivalents" and cash flows that are generated from operations. The Company believes that its working capital is sufficient to meet the financial liabilities within maturity period. Additionally, the Company has invested its surplus funds in fixed income securities or instruments of similar nature thereby ensuring safety of capital and availability of liquidity as and when required.

Notes:

- 1) "Significant Counterparty" and "Significant Instrument/Product is as defined in RBI Circular RBI/2019-20/88 DOR.NBFC (PD) CC.No.102/03.10.001/2019-20 dated November 4, 2019 on Liquidity Risk Management Framework for Non- Banking Financial Companies and Core Investment Companies
